

# Exilion partners with Caverion to ensure domestic maintenance services for a wind park in Finland

Caverion Press release 8 January 2025 at 8.00 EET

## Exilion partners with Caverion to ensure domestic maintenance services for a wind park in Finland

Exilion, a major wind power producer in Finland, has chosen Caverion to be responsible for the maintenance of the Tervola wind park in Northern Finland. The contract covers ten wind turbines and the wind park's electricity distribution.

"Tervola Varevaara was one of the first inland wind parks in Finland. The market has undergone significant changes over the last decade. The cooperation with Caverion allows us to have the management of the wind park in domestic hands, which was a key criterion for us. We also particularly appreciated the flexibility and Caverion's local services," says **Eero Länsimäki**, Operations Manager of Exilion.

Caverion has a comprehensive service network and strong expertise in the Southern Lapland region in Finland, which enables efficient maintenance. Caverion's 8760 Control Center for renewables monitors wind power generation nationwide 24/7.

"We are very pleased that Exilion has the courage to challenge existing practices in the industry. Together with Exilion, we have the opportunity to develop Finnish wind power expertise and the industry as a whole. Our goal is to schedule the maintenance of the Tervola wind turbines so that the disruption to production is minimised. With the help of our digital tools and local experts, we will deliver our services efficiently and transparently for the customer," says **Kari Koivikko**, Head of District, Sustainable Energy Services, Caverion.

Exilion currently owns a total of 15 operational wind parks with a wind power capacity of almost 500 MW. In addition, the company has a solar power project under construction with a capacity of 70 MWp. This makes Exilion a major actor in renewable energy in Finland.
